

## U21 Health Sciences Executive Committee

The U21 Health Sciences Executive Committee supports the proposal for the e-health steering committee to explore the possibility of a health informatics working group (Drs. Harris, Norris, Liaw) to investigate the potential areas of synergy between health informatics and e-health. The objectives of this exploration are to:

- Identify the target audience for an e-health/health informatics certificate programme;
- Develop the entrance requirements, funding, curriculum assessment, and operational characteristics of a certificate in health informatics;
- Determine how health informatics can contribute to the general e-health or global health agenda generally and the U21 e-health agenda specifically.

This group will report back to the Executive Committee at the next U21 health sciences deans meeting in Lund.
