

Faculty Issues: *Institutional Teaching Competences*

Educational Model

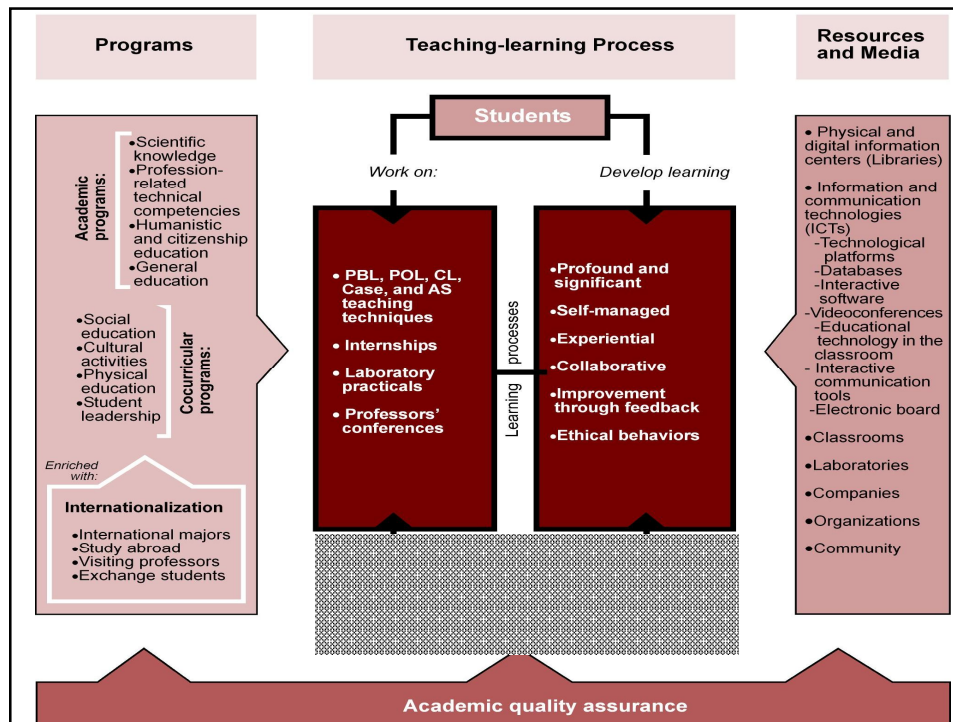

Focuses **on the students and their learning**, for which students are held responsible; the professor plays the role of **facilitator** and guides the students in **discovering knowledge** and **how to apply** it on their own.

To achieve these objectives, the educational model emphasizes **collaborative work** and **uses didactic techniques** such as **problem-based learning**, **project-oriented learning**, and the **case-solving method**.

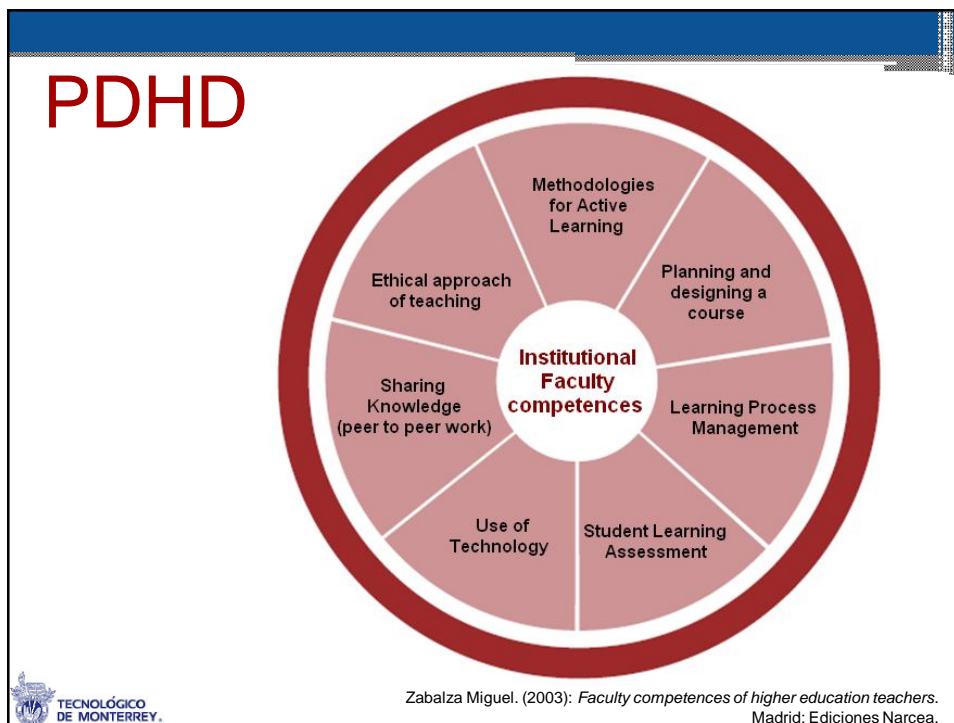

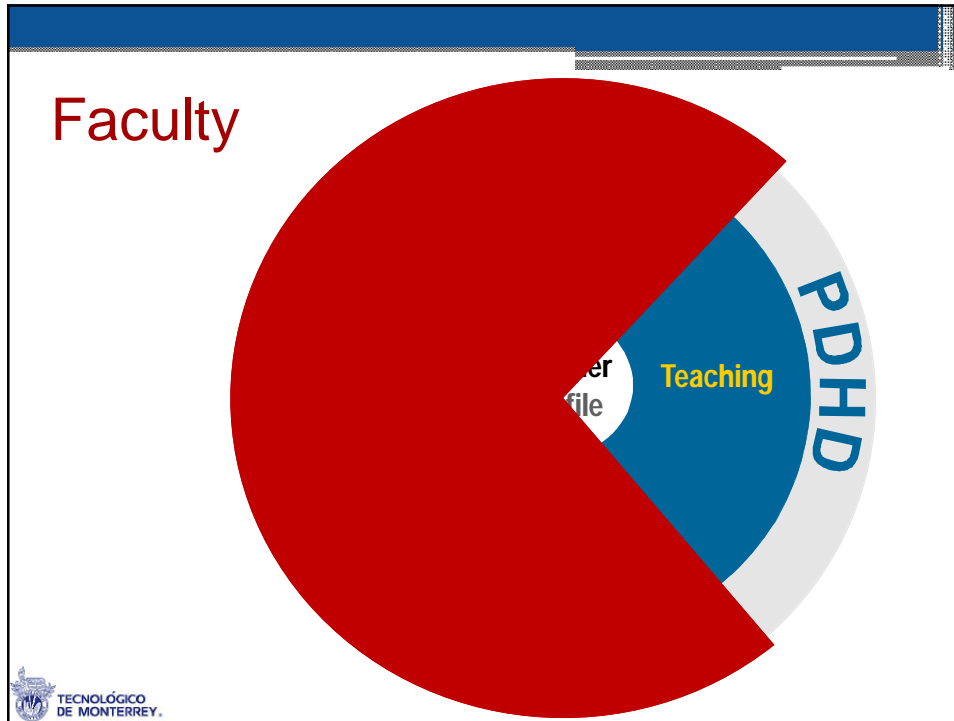

Martín, M. (2002): *Tecnológico de Monterrey Educational Model*. México:

Tecnológico de Monterrey.

Goals

- Focuses on **learner performance** (*learning outcomes*) in reaching specific objectives (*goals and objectives of the curriculum*).
- **Work with health care professionals**, including those from other disciplines, to provide patient-focused care.
- Use **information technology** to manage information, access on-line medical information; and support their own education.
- **Commitment to carrying out professional responsibilities, ethical principles and professionalism.**

Thank you
